

ML910™ Rugged Notebook

Power, versatility, and connectivity – with you everywhere

The ML910™ Rugged Notebook gives your mobile workforce immediate access to business critical information.

Designed for the toughest environments, the ML910™ Rugged Notebook will keep your mobile workers connected — on the factory floor, in the truck, or on-site.

The ML910™ Rugged Notebook

As the need for workforce mobility continues to grow, so does the demand for complex, secure information in real-time. Employees require access to data and applications in order to respond quickly and effectively to customer demands. Information comes in many forms: from text-only bulletins to sales forms, product manuals, data downloads and streaming live video.

Mobile workers and field crews need the same computing power and functionality that office-based workers have. But because their work takes them into a variety of environments, mobile computing solutions must be road-ready and rugged enough to support even the toughest tasks in the harshest environments.

The ML910 Rugged Notebook was designed with all of this in mind. It is connected, powerful, visual – and tough. In a broad range of enterprise environments – from the manufacturing floor to delivery and maintenance vehicles – and for a variety of enterprise personnel, from shop managers to field sales – the ML910 Rugged Notebook gives immediate access to business critical information.

Connected

A fast, reliable data connection is a workforce multiplier. Mobile workers can stay in the field instead of returning to file reports or get information they need – such as inventory information and pricing, or service information and technical manuals. Richer data enables more effective, real-time responses to customer demands.

The ML910 Rugged Notebook is optimized for wireless data, with connections to public and private networks, as well as WiFi, GPS, and Bluetooth®. An innovative antenna design that reflects over 75 years of radio expertise lets the ML910 Notebook stay connected – inside and outside the four walls – where less capable notebooks and laptops give up.

The Motorola ML910 Rugged Notebook... Power. Versatility. Connectivity.

Powerful

The ML910 Rugged Notebook has the processing power to handle anything from on-the-fly data compression to displaying multiple windows of streaming video. Its Intel® Core™ Duo processor and ATI Mobility Radeon™ graphics processor work together to ensure your notebook can handle any data you give it – with plenty of headroom for future applications. Which means personnel can spend less time at the computer, and more time doing their job.

Visual

When you need to see it, the ML910 Notebook will display it with unequalled clarity. With an industry leading display resolution and size, it brings you visual capabilities unmatched by other fully rugged notebooks. Its 13.3" widescreen display provides you with more space to view multiple applications. The display is readable even in direct sunlight, and the included video capture card provides seamless connectivity to mobile video applications. But you can do more than look: the display is a touch screen, and work gloves are no problem.

Tough

It may look like an ordinary laptop, but the ML910 Rugged Notebook is built to work far away from the comforts of an office. Designed from the ground up to be at your side on the toughest assignment, this notebook is ruggedized beyond U.S. Military Standard 810F to withstand sand, water, dust, temperature extremes, vibrations, and the occasional drop. Built-in modem and GPS hardware means being connected without relying on fragile external cards. Whether it's in driving rain, falling snow, a dust storm, bright sunlight – or in a manufacturing environment or maintenance vehicle – the ML910 Rugged Notebook will bring you the information you need, no excuses.

More Secure

As the edges of the mobile enterprise expand, securing business data and information is vital. That's why the ML910 Rugged Notebook offers multiple security options. The integrated TPM chip helps keep your sensitive data secure, while the built-in fingerprint scanner tightly controls access without the hassle and security shortcomings of passwords. Smart card support is also available.

FEATURES

- Fully rugged to tolerate drops, water, dust, and sand (U.S. Military Spec 810F)
- High Brightness (500 NIT) touch screen
- Advanced security features, including smart card support, TPM version 1.2, and built-in 500 DPI+ Fingerprint scanner
- Connects to private data networks (using optional built-in modem or PC card)
- Supports public wireless broadband, including 3G cellular (using optional built-in modem or PC card)
- Optional built-in GPS
- Dedicated Video Processor and Video Memory for faster screen updates
- Motorola service and support
